

We did the test before getting pregnant.

Jiimaakwii?

Cree leukoencephalopathy (CLE) and Cree encephalitis (CE) are severe and non-curable diseases. They can be transmitted when both parents are carriers.

We can tell you whether or not you are at risk to transmit CLE and CE. Services and options can be offered to a couple at risk.

For the future of you and your child you can know if you are a carrier.

For more information please contact:

Educational and Carrier Screening Program for CLE and CE

819-855-9001, extension 4412

or your local CHR, nurse or doctor.
