Public Health Update

Whapmagoostui / Kuujjuarapik dump fire

The Cree Health Board issued a health advisory on August 30th, 2017. Since then the fire at the dump has been put out.

If you turned your air exchanger off during that time, please turn it back on. The air exchanger is important for health because it will remove stale and polluted air indoors, and replace it with fresh air.

If you have any questions regarding your air exchanger, please contact the housing department.

For further information, please contact:
