The plate method

dR"CC° L°

A visual tool to help you to:

- Control your blood sugar
- Prevent diabetes
- Prevent cardiovascular diseases, cancer and other chronic diseases

Imagine that your plate as four equal parts

Step 1

Use 1 part for starch

Step 2

Use 1 part for meat,
fish or meat substitutes

Step 3

Use 2 parts for vegetables

Step 4

You can have a glass of milk
or water and a fruit to
complete your meal

Note

*Foods high in fibre help to keep our bowels regular and makes us feel full. Eating regularly a variety of high-fibre foods may also help you to control your blood sugar and your cholesterol levels.

Take a regular* size plate

*About 9 inches (23 cm)

Let's look at each part of the plate

Starch

- Prefer whole grain breads and cereals, brown rice, whole grain noodles, regular oats, barley.
- By choosing whole grain products you are adding fibre* to your meal.

Protein

- Proteins are found in traditional meat, store-bought meat and poultry, fish and substitutes like eggs, tofu, beans and peanut butter.
- Cook your meat and fish using low-fat methods: boil, bake, smoke, broil and roast.

Vegetables

- 2 parts of veggies in your plate may be more vegetables than you are used to, but that's o.k. By eating more vegetables you are adding fibre*, vitamins, minerals and colors to your meal.
- A variety of vegetables are available all year around, fresh and frozen.

Milk or Water

- Choose milk or water with your meal.
- A glass of milk will bring many nutrients, including calcium and vitamin D that are good for bones.
- Water ... is life!

Fruit

- Choose a fresh, frozen or a canned fruit... Fruit make excellent dessert.
