

Smoking Cessation Guide (pharmacotherapy)

Note to doctor: Please write the chosen regimen on usual prescription form & carbon copy Also, discuss with your patient non-pharmacological aids and behavioral support, for example: http://iquitnow.qc.ca/ (http://jarrete.qc.ca/) or http://www.defitabac.qc.ca/en.

	Start Nicotine Transdermal Patch. Patient should stop smoking completely once nicotine replacement therapy is initiated. The patch should be applied each morning to non-hairy, clean, dry, intact skin on the upper arm or torso. A fresh skin site should be used for each application. If insomnia/nightmares occur, the patch may be removed at bedtime and a new patch reapplied in the morning. The patient can use a short acting nicotine replacement (example: gum) for early morning cravings. Treatment can be prolonged to 12 weeks.
	IF > 20 cigarettes/day 21mg patch daily x 6 weeks 14mg patch daily x 2 weeks 7mg patch daily x 2 weeks
	IF > 10 or < 20 cigarettes/day, any patient with current Acute Coronary Syndrome (ACS) or the patient weighs less than 45kg 14mg patch daily x 6 weeks 7mg patch daily x 2 weeks
	IF < 10 cigarettes/day 7mg patch daily x 6 weeks
