SIGNS OF HIGH BLOOD GLUCOSE (HYPERGLYCEMIA)

WHAT TO DO IF YOU HAVE HIGH BLOOD GLUCOSE

HYPERGLYCEMIA

Hyperglycemia happens when there is too much sugar in the blood

Hyperglycemia is high blood glucose over:

- 7 mmol/L fasting and before meals
- 10 mmol/L 1 hour after meal
- 8 mmol/L 2 hours after meal

To know if your BG is high, you need to check it, since you can feel well and have high BG.

If thirsty, drink water.

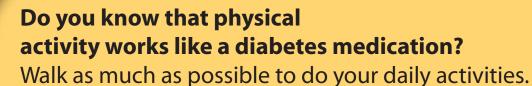

If your blood glucose is over 10 mmol/L for more than 3 days in a row, with or without symptoms, talk to your health care team.

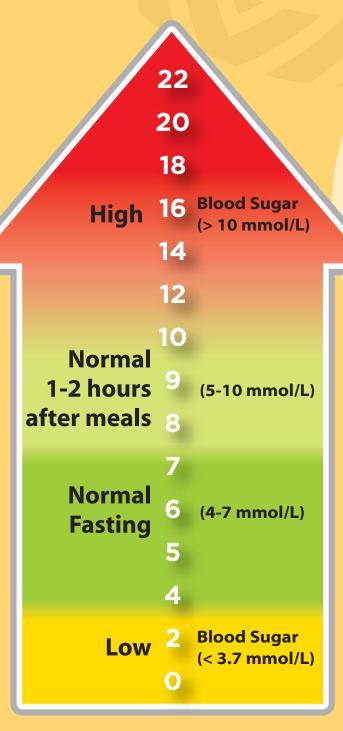

It's normal to adjust your diabetes medication overtime.

It's not diabetes that causes complications, but high blood glucose for a long period of time.

WHY DO I HAVE HIGH BLOOD GLUCOSE

- I'm less active?
- I forgot my medication?
- It's time to adjust my medication?
- I have trouble with insulin injection?
- My glucometer isn't accurate?
- I'm eating more carbs than usual?
- I feel sick or I'am having an infection?
- I'm stressed?
